ARM Assembly for Embedded Applications 5th edition DANIEL W LEWIS

ARM Instructions Worksheet #11

Constant Multiples

Prerequisite Reading: Chapter 7

Revised: May 11, 2020

Objectives: To use the web-based simulator ("CPULator") to better understand ...

- 1. That multiplying by a constant requires two instructions one to load a register with the constant followed by a MUL.
- 2. The use of a single addition or subtraction with shifting to compute N times a variable without multiplying.
- 3. The use of a two-instruction sequence to compute N times a variable in the same time as using a MUL.

To do offline: Answer the questions that follow the listing below. (Numbers at far left are memory addresses.)

```
.global
                                  _start
                                  unified
                    .syntax
                                  R1,=1 // *** EXECUTION STARTS HERE ***
00000000 _start:
                    LDR
                    // Creating multiples using 1 instruction (faster than MUL)
00000004
                    LSL
                                  R0,R1,3
                    ADD
                                  R0,R1,R1,LSL 3
8000000
000000C
                    RSB
                                  R0,R1,R1,LSL 3
00000010
                    SUB
                                  R0,R1,R1,LSL 3
00000014
                                  R0,R1,LSL 3
                    MVN
                    // Creating multiples using 2 instructions (same time as MUL)
                                  R0,R1,R1,LSL 2
00000018
                    ADD
0000001C
                    LSL

00000020
                    ADD
                                  R0,R1,R1,LSL 2
00000024
                    ADD
                                  R0,R1,R0,LSL 2
00000028
                    ADD
                                  R0,R1,R1,LSL 4
0000002C
                    SUB
                                  R0, R0, R1, LSL 2
00000030
                    RSB
                                  R0,R1,R1,LSL 3
00000034
                    LSL
                                  R0,R0,1
00000038
                    ADD
                                  R0,R1,R1,LSL 2
                                  R0,R1,R0,LSL 2
0000003C
                    RSB
00000040 done:
                                  done
                                        // Infinite loop
                    .end
```

What is in register R0 after executing the LSL instruction at address 00000004 ₁₆ ?	8
What is in register DQ often executing the ADD instruction at address 00000000 2	R0 (as decimal signed)
What is in register R0 after executing the ADD instruction at address 00000008_{16} ?	R0 (as decimal signed)
What is in register R0 after executing the RSB instruction at address $0000000C_{16}$?	7
	R0 (as decimal signed)
What is in register R0 after executing the SUB instruction at address 00000010 ₁₆ ?	-7
	R0 (as decimal signed)
What is in register R0 after executing the MVN instruction at address 00000014 ₁₆ ?	-9
	R0 (as decimal signed)
What is in register R0 after executing the LSL instruction at address 0000001C ₁₆ ?	10
	R0 (as decimal signed)
What is in register R0 after executing the ADD instruction at address 00000024 ₁₆ ?	21
William to Do Good and Gubin and a subject to the concessor of	R0 (as decimal signed)
What is in register R0 after executing the SUB instruction at address 0000002C ₁₆ ?	13
What's 's as it a DO (for some time to LCL 's as at 11 some 00000024, 2)	R0 (as decimal signed)
What is in register R0 after executing the LSL instruction at address 00000034 ₁₆ ?	14
What is in register DQ after executing the DCD instruction at address 0000002C 2	R0 (as decimal signed)
What is in register R0 after executing the RSB instruction at address 0000003C ₁₆ ?	19

R0 (as decimal signed)

Getting ready: Now use the simulator to collect the following information and compare to your earlier answers.

- $1. \quad \text{Click } \underline{\text{here}} \text{ to open a browser for the ARM instruction simulator with pre-loaded code.} \\$
- 2. Change the number format in the "Settings" window to signed decimal.

Step 1: Press F2 once per ARM instruction as needed to see what the simulator says for the following:

What is in register R0 after executing the LSL instruction at address 00000004_{16} ?	R0 (as decimal signed)
What is in register R0 after executing the ADD instruction at address 00000008_{16} ?	R0 (as decimal signed)
What is in register R0 after executing the RSB instruction at address $0000000C_{16}$?	R0 (as decimal signed)
What is in register R0 after executing the SUB instruction at address 00000010 ₁₆ ?	R0 (as decimal signed) -7
What is in register R0 after executing the MVN instruction at address 00000014 ₁₆ ?	R0 (as decimal signed) -9
What is in register R0 after executing the LSL instruction at address $0000001C_{16}$?	R0 (as decimal signed)
What is in register R0 after executing the ADD instruction at address 00000024_{16} ?	R0 (as decimal signed)
What is in register R0 after executing the SUB instruction at address 0000002C ₁₆ ?	R0 (as decimal signed)
	R0 (as decimal signed)
	R0 (as decimal signed)
What is in register R0 after executing the LSL instruction at address $0000001C_{16}$?	R0 (as decimal signed) 10 R0 (as decimal signed) 21 R0 (as decimal signed) 13 R0 (as decimal signed) 14
